

FOR SOCIALISM: End Austerity, War and Racism

End Austerity

Immediate 15% pay increase for NHS workers - support the protests.

Private companies out of public services! No profiteering from health and social care. Nationalise social care, pharmaceuticals and health technology companies.

Mass, co-ordinated campaigns for a new settlement for local government based on jobs, services and local economies.

Safe, affordable housing for all! Mass eco-council house building and street-by-street renovation programme, re-claim long term empty properties to end homelessness.

Rent cap linked to earnings and tenants rights to hold rogue landlords to account.

Increase and collect the tax owed by big business and the super rich tax dodgers

No to austerity - for a mass fightback against all cuts to jobs, services, pensions and social security.

Transform Labour

Extend workers rights, collective bargaining and scrap anti-trade union laws. Active support for workers in struggle and building the trade union movement - democratise the union link with Labour.

Inclusive, democratic and sovereign national conferences of delegated affiliates and members only, to decide on policy, strategy and rule changes. Local District Labour Parties based on the same model to decide the selection, policy and campaigning priorities of the Labour group.

Socialist MPs - decided by members and affiliates with open selections, a right of recall, and living on a "workers wage", donating the surplus salary to the movement.

For national conference to have the right to trigger a leadership/deputy leadership contest, not just the PLP.

For Socialism

A nationalised financial system to provide economic security against "flight of capital" and bankers profligate greed.

For socialist green new deal, with mass investment into infrastructure, research and development in energy, transport, housing, health, education, science & technology sports & cultural facilities and public services generally.

Workers control and management of the democratic publicly owned industries of the commanding heights of the economy. No compensation without proven need and just cause.

For a democratic national plan of production on the basis of social and environmental need, not private profit and greed.
